This is achieved by the modular design as well as the decoupling of the ISDN/Analog Stacks from the PBX through SIP. Now we can use the same products for our appliances and servers as for our virtual solutions. This saves us building knowhow for a number of different products, casually simplify our warehousing and all for a great cost/performance ratio.
The initial field tests were flawless. We installed a number of MobyDick PBXs with several hundred users each with E1 and S0 modules.◆</p> </td> </tr> </table>
